

Respiratory System

Air we breathe is clean, warm, and properly humidified before it reaches our lungs

They are like the branches of a tree inside your lungs. They let the air go inside your lungs.

Nose

Windpipe

Bronchi

Lungs

It's often called the "windpipe," is like a special tube in your throat. Its job is to help you breathe and talk.

They extract the oxygen your body needs when you breathe in. When you breathe out, they take out the carbon dioxide.
