

Effects of deforestation

- Destroys natural habitat of wildlife
- Air pollution
- Upsets the balance of gases in the air causing disruptions in the water cycle
- Increases the chances of soil erosion

Greenhouse effect

- High amounts of carbon dioxide in the atmosphere
 - Causes heat to be trapped in the atmosphere
 - Leading to global warming
 - Polar ice caps melting and raising sea levels

Water pollution

- Oil spill
 - Covers large area over the sea and preventing light from entering
 - Resulting in plants not receiving sunlight to photosynthesize

MAN'S IMPACT ON ENVIRONMENT

Air pollution

- Fumes from cars
 - Carbon monoxide which reduces the amount of oxygen blood carries
 - Sulfur dioxide causes acid rain
- CFC (Chlorofluorocarbon)
 - Destroys the protective ozone layer which allow UV rays to enter the earth and causing skin cancer

Land pollution

- Landfills
 - Causing land to be contaminated poisoning the soil
 - Pollutes farmlands
